BASIC NATIVE EROSION CONTROL MIX

This mix of annual native California species has been formulated for rapid growth in the lower rainfall climates and varied soil types of Central and Southern California. For this reason, it is the best choice for permanent or temporary cover in areas that may not support perennial natives without the addition of irrigation or soil amendments. These seeds are adapted to our climates and plant communities and can be used around sensitive native habitat and in conjunction with other species, including wildflowers, without the fear of native gene contamination.

<u>SPECIES</u>	<u>COMMON NAME</u>	<u>BULK #'s/ACRE</u>	<u>*</u>
<i>Bromus carinatus</i> 'Cucamonga'	Cucamonga brome	20.00	
<i>Festuca microstachys</i>	Small fescue	8.00	
<i>Trifolium ciliatum</i>	Foothill clover	<u>4.00</u>	
		32.00	

* MIN % PLS (Pure Live Seed) = Seed Purity x Germination Rate
